

Strategies for Professional Growth

Team Contract : May 2026

Team No : 13

Project Title

Navigating Growth : A Systematic Study on Workplace Resilience and Lifelong Learning

Team Members

Broad Project Theme :

Core Skills 2030 – Curiosity and Lifelong Learning, Resilience, Flexibility and Agility + SPG (W8, W9, W12) – Creativity and Thinking Skills, Cultivating a Growth Mindset, Personal and Professional Development

- This project bridges the WEF 2025 core skill pillars of adaptability and curiosity with the SPG mental frameworks of a Growth Mindset.
- Systems Thinking to analyze how modern technical professionals survive disruptive industry changes.

Core Project Objectives

Before diving into the fieldwork, our team defined exactly what success looks like for us. We broke our vision down into three distinct areas: the academic standard we want to hit, the specific skills we want to walk away with, and the kind of team culture we want to build.

Academic & Performance Goals

Practical Learning Goals

Culture & People Goals

We are aiming for a final grade of 90% or higher. We will achieve this by making sure every interview we conduct with industry professionals is deeply analyzed and cross-checked against the core grading rubrics before we submit a single draft.

We want to master the art of conducting high-level qualitative interviews. Our goal is to move beyond textbook theory and see exactly how concepts like the Growth Mindset and Systems Thinking are actually used by professionals dealing with real-world disruptions.

We want to run this group like a professional consulting unit, not just a standard college group. This means building genuine trust, respecting each other's time, and walking away from this course with a reliable network of peers we can collaborate with in the future.

Team Action Processes

To turn our goals into reality, we need a clear operational playbook. This outlines exactly who drives the project, how we make calls as a group, the way our workflow is phased, and the tools we use to stay seamlessly connected every step of the way.

Leadership & Ownership :

As Team Lead, Sameer will track our daily milestones to keep us on schedule. Every member fully owns one field interview, while specific tasks like quality control, presentation design, and data synthesis are divided based on our core strengths.

Decision-Making :

We tackle major project decisions through open discussion until everyone is aligned. If we ever hit a roadblock that threatens our timeline, I will step in to make the final call so we maintain our forward momentum.

Phased Workflow :

We start by working independently to conduct our five separate interviews. Once the raw data is gathered, we pool our findings together to map out shared trends and build the final report as a single unit.

Communication Stack :

We use a dedicated Google Chat space for quick, day-to-day updates to keep our inboxes clean. For deeper strategic planning and milestone reviews, we will plan on Jira.

Project Action Processes

Meeting Protocols

We hold our primary alignment meetings every Saturday evening via Google Meet. To respect everyone's time, agendas are dropped in our group chat 24 hours in advance, and we keep our calls strictly under 45 minutes to focus purely on execution rather than endless updates.

Workload & Backup Plans

We divide tasks fairly based on our individual strengths. If someone feels overwhelmed, we redistribute the work openly without placing blame. In the event of a genuine emergency, the remaining four members will instantly step up and split the pending tasks to protect the timeline.

Reviews & Resources

We keep a centralized Google Drive for all our files so nobody is ever locked out of the resources they need. We review progress against our live tracker and set our internal deadlines 48 hours before the official college cutoff to guarantee time for peer review.

Interpersonal Processes

How we treat each other is just as important as the work we submit. These are our ground rules for resolving friction, keeping team morale high, and navigating both our successes and our setbacks together as a unified group.

Managing Conflict

We maintain a strict boundary between project debates and personal respect. Disagreements about data or design are actively encouraged, but personal attacks are strictly off-limits.

Conflict De-escalation

If personal friction does occur, we pause execution to address it privately. Santhanu steps in as a neutral mediator to clear the air, ensuring we can move forward without any lingering tension.

Starting with Positivity

We want this to feel like a supportive workspace, not just a stressful college assignment. Every weekly sync starts with a quick check-in to ensure everyone feels heard before we dive into our tasks.

Valuing Every Voice

We actively make space for our quieter members to speak up. By respecting each other's time and explicitly appreciating individual contributions, we keep the team environment genuinely positive.

Celebrating Our Wins

When we hit a major milestone or finalize a tough section of our report, we take a dedicated moment during our weekly call to acknowledge the hard work of the specific members who made it happen.

Blameless Setbacks

If we miss an internal deadline or fail to meet a goal, we run a "blameless review." We focus entirely on what broke in our operational process and how to fix it, rather than pointing fingers at any individual.
