

Navigating Growth - A Systematic Study on Workplace Resilience & Lifelong Learning

*Course : Strategies for Professional Growth (SPG) | May 2026
Project Report — GP2 | Case Study*

Prepared by - Team 13

Sameer Thakur (Team Lead) | 23F2003673

Anjali Gupta | 21F2000306

Tulika Chatterjee | 23F1001999

Gaurav Tomar | 23F1000805

Santhanu | 23F2004832

Research Methodology

A multi-layered approach to analyzing workplace resilience and technological adaptability.

Qualitative Interviews (Primary Data)

Conducted 5 semi-structured, 1-on-1 virtual interviews with mid-to-senior professionals (AdTech, Telecom, Construction, AI) to extract experiential stories on failure and resilience.

Quantitative Survey (Additional Method)

*Deployed a structured Google Form questionnaire, collecting responses from 29 working professionals to cross-validate our findings on future skill priorities.
(done by Anjali Gupta)*

Secondary Research

Benchmarked our empirical data against the WEF Future of Jobs Report 2025 and SPG Course Modules (W8, W9, W12) to test academic theories in real-world contexts.

Data Extraction & Synthesis

Transcribed video recordings, extracted verbatim evidence, and mapped direct quotes to core themes of workplace adaptability and cognitive unlearning.

Practical Application (Modeling)

Analyzed synthesized data to construct technical influence models, demonstrating how concepts like 'cognitive offloading' and 'automation bias' apply to real-world workflows.

Analysis & Key Findings

Our primary data reveals five simple, real-world habits for surviving disruption and sustaining long-term career growth.

Learn by Doing

Certificates prove your knowledge, but real skills come from tackling daily, hands-on challenges at work.

Value in Mistakes

View early mistakes as helpful lessons that show you exactly where and how to improve.k.

The Art of Unlearning

To keep growing, you must be willing to let go of old habits and outdated rules..

AI as a Helper

Use AI to handle boring, repetitive tasks so you can focus on bigger, creative decisions..

Calm & Trust

True resilience means staying calm under pressure, because real leadership is built on human trust..

Strategic Recommendations

Based on our empirical insights, we recommend these actionable strategies for professionals to thrive amidst rapid industry changes.

1

Cultivate Strategic Agility

Professionals must move beyond rigid job descriptions. When faced with roadblocks, use alternative pathways (e.g., third-party vendors) rather than relying solely on persistence

2

Institutionalize Unlearning

Cognitive adaptability requires the humility to discard outdated methodologies and rigid leadership hierarchies. Clinging to static expertise is a liability in a dynamic ecosystem.

3

Embed Operational Friction

Treat daily challenges and customer interactions as active learning opportunities. While courses provide validation, true competence is forged through hands-on, real-world friction.

4

Prioritize EQ & Emotional Control

Leadership is earned through trust and communication, not just technical coding skills. Practice deliberate pauses to regulate emotional responses during sudden workplace restructuring.

APPLICATION / INFLUENCE MODEL

How Key Practices Influence Workplace Resilience & Lifelong Learning

A simplified influence diagram showing how specific variables interact to drive **Resilience**, **Adaptability** and **Long-term Growth**.

Note: This model is derived from insights of 5 industry professionals across AdTech, Telecom, Construction, AI Automation and Medical Technology.

Project Reflection – Key Learnings & Future Outlook

Continuous Learning

Learning is most valuable when it becomes a daily habit, not an occasional activity. Real growth comes from consistently building new skills and staying curious.

Resilience through Adaptation

Successful professionals don't avoid challenges—they adjust, recover, and find better ways forward when circumstances change.

Learning from Failure

Failures become valuable when they are treated as feedback. Reflection and experimentation create stronger decisions over time.

AI as an Enabler

AI is most effective when it supports routine work, allowing professionals to focus on creativity, judgment, and strategic thinking.

Future-Ready Professionals

Career success depends on combining technical skills with adaptability, lifelong learning, and the willingness to embrace change.

Sameer Thakur

Led project compilation, final deck design, and conducted the AdTech (Taboola) interview.

Anjali Gupta

Executed the Construction industry interview and managed the quantitative Google Form survey.

Gaurav Tomar

Handled the Telecom (Airtel) interview and synthesized frontline digital automation data.

Tulika Chatterjee

Conducted the MedTech/AI interview and mapped qualitative themes across all individual reports.

Santhanu

Led the AI Automation interview and extracted core behavioral and psychological resilience insights.

All five members actively participated; no one opted out or dropped the course. The entire team has reviewed and verified this final report for accuracy. There were no changes to our finalized external participant list.
